

Extrusion Blow Moulding

AluSil International has an expertise in extrusion blow moulding.

Thanks to ongoing investment in new technologies, we always have the very latest in production technologies. This enables us to meet with the growing demands of our customers in terms of price and quality.

We use an extensive range of thermoplastic materials. By using a combination of several processes together, such as injection moulding, blow moulding and thermoforming, we are able to fulfil the most complicated demands.

AluSil International can offer several additional operations:

- Part welding
- Painting
- Assembly
- Printing
- Foaming
