

Profiles

During the years AluSil International has become an important supplier of high quality thermoplastic extrusions.

All profiles are developed and produced according to customer-specific requirements.

We are using the techniques of mono-extrusion, co-extrusion and tri-extrusion, whereby various colors, plastic materials and even aluminium foil can be combined in one single profile.

We offer secondary services such as cutting, punching, drilling, welding, printing and more.

The following thermoplastic materials are being processed:

- Polyvinylchloride (rigid- and plasticized-PVC)
- Polypropylene (PP)
- Polyurethane (PU)
- Polyethylene (LDPE, HDPE)
- Acryl – Butadiene – Styrene (ABS)
- Polymethylmethacrylate (PMMA)
- Polyamide (PA)
- Polycarbonate (PC)
- Polystyrene (PS)
- Thermoplastic Polyurethane (TPU)
- Thermoplastic Elastomer (TPE)
- Cellulose – Acetate – Butyrate (CAB)
