Rubber Mouldings

AluSil International offers solutions for customer-specific problems in the form of high-precision moulded rubber components.

We have the latest horizontal and vertical injection moulding technology (also **Liquid Silicone Rubber**) and a range of modern compression moulding presses. By these processes, rubber components such as ***O-rings, gaskets, bellows, grommets, (oil)seals, pipes, diaphragms*** and even ***rubber-metal bonded parts***, are being produced.

The offer includes mouldings from blends of all customary rubbers such as ***EPDM, NBR, SBR, CR, NR, VMQ, FKM***.

Our blends are approved by the most known international certifying organizations (***F.D.A. – N.S.F. – WRAS – K.T.W. – W270 – EN 681-1 – AS 4020 – ACS – UL*** etc.) or will be developed together with our customers.

Owing to constant technological advancement, Alusil International can convert the customer requirements to cost competitive products with high technical know-how.
